

Touchless Technology for a Post-Covid World

Increase workplace safety with touchless technology from NCS

Workplaces around the world are learning to adapt in the wake of COVID-19. In the new normal, we're all more aware of everything we touch, especially in the office.

Door handles, light switches, elevator buttons, stair railings. The list goes on. How can we keep people safe without interfering with their ability to work and live? As businesses reimagine their workspaces, new technology can help create a safer environment.

Before the pandemic, touchless technology was just a cool feature. Now, they have gone from nice-to-have to essential safety tools.

The CDC says businesses should reduce common touchpoints in the office. Any items that can't be removed should be cleaned frequently.

Environmental Sensors

Integrate your systems using PoE to monitor and control CO2 levels, humidity, air quality and other areas of your HVAC system.

Mobile Room Control

No IP addresses to type, no passwords to remember – simply open an app and go. Employee's personal device detects nearby AV systems and auto connects.

Meetings On-The-Go

Quickly deploy video communications anywhere, anytime with on-the-go meeting and collaboration rooms out of any space.

Teleportivity Solutions

Greet guests virtually, provide touchless sign-in via a guest's personal device, and offer guided wayfinding assistance to their destination.

Digital Signage & Hand Sanitizer Kiosks

The next logical step in public safety. Promote your message when people stop to clean their hands. Promotion with a purpose.

Smart Cameras

Use thermal imaging cameras, scanners and occupancy sensors for people counting, potential illness detection, and space management.

Intelligent Meeting Rooms

Integrate with essential technologies like occupancy sensors that turn systems on/off and digital media products to enable wired presentations and sharing.

Room Scheduling

Optimize your meeting space with data on space utilization, room cleanliness, and capacity. Directly connects to most popular calendaring platforms.

Access Control

Multi-technology readers with a feature-rich mobile app supports mobile & physical credentials and allows upgrading access control systems at your own pace.

Mobile Credentials

Enable building occupants to eliminate a significant number of access touch points by turning smartphones into secure access control devices.

Offices

Conference Rooms

Lobby

The right touchless technology for your workplace

By minimizing face-to-face contact and touchpoints, you can protect your employees and guests from the moment they walk up to the door to the minute they walk out. Today's innovations in touchless technology enhance office safety without sacrificing security or accessibility. Automate your workplace with processes and technology that interoperate to not only increase safety but create efficiencies that can save you money.

About NCS: Connecting The Communications Of Tomorrow

Network Cabling Services (NCS) was founded in 1981 in Houston, TX, a technology-driven, single-source solution provider for all our client's audio visual, cabling infrastructure, design-consulting, and networking and security needs. Since then, we have grown to more than 300 employees across six Texas locations while expanding our services to in-building wireless systems to deliver public safety and cellular communications and network-powered lighting systems.
