**Flexible Workflow Configurator**

**Easy-To-Use Staff & Device Assignment**

**Efficient System Management**

**High-Availability** - 99.999% reliability, minimize planned and unplanned downtime

### Intuitive Workflow Builder

Our flexible clinical workflow tool enables customized design of rules-based configurations of alerts and alarms, standardizing care protocols across your enterprise, independent of your deployed nurse call system(s). Request types, escalation protocols, staff roles, delays, reminders etc. can be easily set up and managed on a unit-by-unit basis or across the entire enterprise.

### Easy Staff & Device Assignments

CommonPath features comprehensive, user-friendly, role-based assignments that are shared by nurse call, alarm management and more, designed around patient need, staff capacity and responsiveness/safety goals.

### Vast Integration Library

CommonPath offers numerous native integrations with mobile and CC&C platforms (Voalte/Vocera/Spectralink/Cisco/Zebra etc.), RTLS manufacturers, EHR/EMR, and bed manufacturers (Stryker), providing contextualized smart alarm/event notifications to any mobile device.

### Streamlined Responsiveness

CommonPath's enterprise software approach allows for centralized triage of alarms with callback to the room from anywhere on the network. This leads to faster responsiveness, increased patient satisfaction and safety, streamlined notification, and prevention of alarm fatigue.

### Enhanced Rounding Practices

CommonPath features a leader rounding module that integrates both the patient's perception and behavior based on their nurse call and communications activity. Available on mobile devices, it allows for seamless collaboration between providers and will transform patient experience.

### Patient Experience Analytics

Our intuitive, intelligent analytics and reporting platform provides real-time and retrospective insights and clinical decision support for caregiver workload management, patient engagement, satisfaction and safety.

- Comprehensive view of call requests types, staff responsiveness, staff workload management rounding effectiveness and more, unit by unit, or normalized across your enterprise
- Deep dive analysis of data for disparate nurse call system brands
